

Preparation required for Wi-Fi connection:

You will need a 4G mobile phone and a wireless router. Connect your wireless router to your mobile phone and write down the WIFI password [you will need it after pairing the thermostat with the Wi-Fi

network]. **Step 1 Download the app on your phone**

Android users can download the "Tuya Smart" or "Smart life" app on Google Play, and iPhone users can search for "Tuya Smart" or "Smart life" on the App Store.

Step 2 Register your account

- Once the app is installed, click "sign up" (Fig. 2-1).
- Read the Privacy Policy and press the I Agree button to proceed to the next step. (Fig. 2-2)
- The registration account name uses an email address or mobile phone number. Select the region, then click "Continue" (Fig. 2-3)
- You will receive a 6-digit verification code via email or SMS. Enter it in the verification window on your phone (Fig. 2-4).
- Set a password. The password must contain between 6 and 20 letters and/or numbers. Click "Done" (Fig. 2-5)

Figs 2-5

Step 3 Creating Home Information (Fig. 3-1)

- Type the name of your home (Fig. 3-2).
- Select or add a room (Fig. 3-2).
- Set the location permissions (Fig. 3-3), and then set the thermostat location (Fig. 3-4).

Figs 3-4

Step 4a Connect the Wi-Fi signal (EZ distribution mode)

- Go to your phone's Wi-Fi settings and make sure you're connecting via 2.4 g, not 5 g. Most modern routers have 2.4g and 5g connections. 5g connections do not work with the thermostat.
- On your phone, press "Add Device" or "+" in the upper right corner of the app to add a device (Fig. 4-1) and in the small appliances section, select the device type "Thermostat" (Fig. 4-2).
- With the thermostat on, press and hold the " " and " " buttons simultaneously until both icons(and) flash to indicate EZ distribution mode. This can take anywhere from 5 to 20 seconds.
- On the thermostat, confirm the connection by pressing the and icons will flash rapidly, at this time Confirm the connection in the app. Enter the password of the wireless router (case sensitive, see Fig. 4-4) and confirm. The app will connect automatically (Fig. 4-5) Typically, it may take up to 5~90 seconds.

If you get an error message, make sure that you have entered the correct Wi-Fi password (the bottom of the router is usually case-sensitive) and that you are not using a 5G Wi-Fi connection. You can edit the room name after connecting the device.

Step 4b (Alternate Method) (AP Mode Pairing) Only perform this action if step 4a failed.

- On your phone, press "Add Device" or "+" on the top right corner of the app (Fig. 4-1) and in the small appliances section, select the device type "Thermostat" and click AP Mode on the top right corner. (Fig. 5-1).
- On the thermostat, press the power button, then press and hold " " and " " until the " " flashes . This can take anywhere from 5 to 20 seconds. If it is also flashing, release the buttons and press and hold " " and " " simultaneously again until only " " flashes .
- In the app, click "confirm LED flashing" and then enter the password of your wireless router(Fig. 4-4).
- Press "Connect Now" and select the thermostat's Wi-Fi signal (Smartlife-XXXX) Fig. 5-3 and 5-4) . You will get a message that the Internet may not be available and a request to change the network, but you should ignore it.
- Go back to the app and click "Connect". The app will connect automatically (Fig. 4-5).

Typically, this can take anywhere from 5~90 seconds, and then it will display a confirmation (Fig. 4-6) and allow you to rename the thermostat (Fig. 4-7).

Step 5 Programming the daily schedule

Press the setting button (Fig. 4-8) in the lower right corner to display the menu. At the bottom of the menu, there are 2 standalone options called "weekly program type" and "weekly program setting". "Weekly Program Type" allows you to select the number of days to be scheduled, between 5+2 (weekday+weekend) 6+1 (Monday-Saturday+Sunday) or 7 days (whole week). The "Weekly Program" setting allows you to select the time and temperature of your daily schedule at different points. There will be 6 time and temperature options. See an example below.

Part 1	Part 2	Part 3	Part 4	Part 5	Part 6
Wake up	Leaving the house	Return home	Leaving the house	Return home	Sleep
06:00	08:00	11:30	13:30	17:00	22:00
20°C	15°C	20°C	15°C	20°C	15°C

If you don't need the temperature to rise and fall in the middle of the day, you can set the same temperature in parts 2, 3 and 4 so that it doesn't rise again until the time in part 5.

Additional Features

Vacation Mode: The thermostat can be programmed to maintain the selected lower temperature while the user is away for up to 30 days. Vacation mode can be found in the button

" " (Fig. 4-8). You can set the number of days from 1 to 30 and the temperature up to 27 °C.

Lock Mode: This option allows you to lock the thermostat remotely so that no changes can be made. This can be done by clicking on the " " (Figs. 4-8). To unlock, click the " ", (Fig. 4-8).

Device Grouping: You can group multiple thermostats together and control them all at once. This can be done by clicking the " " button (Fig. 4-8) in the upper right corner and then clicking Create Group. If you have multiple thermostats connected, this will allow you to select each one you want to be in the group, and once you confirm your selection, you can name the group.

Home management: You can add other people to your home and let them control your connected devices. To do this, the family member must have the Smart Life app downloaded on their phone and a registered account. After that, you need to go back to the home page and click on the home name in the top left corner, then click on Home Management. Once you've selected the home you want to manage, you'll see an option to Add Member. To send him an invitation, you need to enter the mobile number or email address with which the member registered the application. You can set whether they're an administrator, which allows them to make changes to the device, such as deleting it.
